

Orbital Welding Training from Swagelok

Learn valuable skills for operating the Swagelok® M200 orbital welding system.

Your resource for expert knowledge and training

Swagelok training courses provide critical skills for developing, building, and maintaining dependable fluid systems. Taught by Swagelok-certified trainers, these courses can help your team develop the skills they need to ensure leak tight installations.

The need for orbital welding training

Critical fluid systems often require welding for assembly. While automatic orbital welding can help you overcome certain challenges, proper orbital welding training is still essential to equip your welders for success. Our training is designed specifically for those who will be using the Swagelok M200 welding system. With a comprehensive training, attendees will be able to set up, operate, troubleshoot equipment, and critique weld quality.

About our orbital welding training course

This 6-8 hour training uses classroom instruction and valuable activities to help attendees develop the skills needed to make precise, consistent, quality orbital gas tungsten arc welds (GTAW). The course will cover:

- Basic welding fundamentals
- Tungsten electrodes
- Shielding/purging gases procedures
- Setup and operation of welding equipment
- Preventative maintenance
- Troubleshooting
- Orbital weld evaluation
- Single pass welding vs. multi-pass welding
- Weld procedures with hands-on orbital welding

Our training process makes a big difference

At Swagelok Minnesota | North Dakota | Minnesota, we make training easy, effective, and affordable.

- No prior welding experienced is required
- Date and location set by you (based on availability)
- Time commitment is only one day
- Affordably priced at \$800 per attendee
- Lunch and course materials are provided

Start benefiting from our training courses
